

CSE 486/586 Distributed Systems
Project 2
Abstract

This is an entirely new project. Although it is a team project, I am working alone on it, this gives me an opportunity to learn more.

I am planning to use Java for the implementation of the Part 2 and Part 3 of this project. Java is a strongly typed language and provides a lot of flexibility in terms of sending messages and operations on classes and interfaces for this project.

The plan is to implement following interfaces:

- 1) Subscriber
- 2) Publisher

Join(), quit(), subscribe() would be the functions.

Docker is going to be used for the project.
